The North Point Facility Outfall Rehabilitation Project

Our Sewer System Upgrades are Underway

During heavy rains, the North Point Facility provides pre-treatment and primary-level treatment with disinfection of wastewater collected in the north part of the City. Outfall structures discharge treated wastewater under Piers 33 and 35 and into the Bay. As the exclusive wet-weather treatment facility dedicated to reducing the rain’s impact on the City’s system, it is vital that the North Point Facility and associated facilities maintain reliable and safe operation.

The North Point Facility Outfall Rehabilitation Project will remove sediment buildup inside and outside the North Point Outfall structure, and reline/install corrosion protection systems on pipes and structural supports. These facilities are a critical part of wastewater operations and due to aging and the harsh marine environment are in need of repair.

**Estimated Construction Schedule**

<table>

<tbody>
<tr>
<td>2017</td>
<td>MAY - OCTOBER</td>
</tr>
</tbody>
</table>

After 50+ years in the harsh marine environment the sewer pipes and outfalls have experienced severe corrosion and need rehabilitation.

**PROJECT BENEFITS:**

- Increase sewer system reliability and continue to provide sewer services during wet weather conditions.
- Protect water quality and aquatic life in the Bay.
- Clean and reinforce critical outfall structures.

**Project Contact Information**

A 30-day and 10-day notice were distributed prior to start of construction. Construction & Project Contact Information:

Project questions and SFPUC General Hotline: 
(415) 554-3289 or ssip@sfwater.org

Construction Details

Construction is expected to last approximately 6 months, from May 2017 to October 2017, and crews will work to reduce traffic disruption in the surrounding streets.

- To minimize length of project and impacts to community, construction crews will be working Monday through Friday, 24 hours a day.
- Construction will not occur while a cruise ship is docked at Pier 35. Crews will stop work and clear the site before, during, and after cruise ships are in Port.
- Sewer service in the area will NOT be interrupted during construction.
- Businesses and residents in the work zone will maintain access to their garages and entrances.
- Construction crews will access underground facilities from the northbound parking lane in front of Pier 33 and 35. During this period through traffic will continue but may be impacted.
- Sidewalks will remain accessible to pedestrians. For safety, portions of the sidewalk may be sectioned off, covered by a ramp or re-routed.
- Street parking will not be allowed near construction zones. “No-parking” signs will be posted 72 hours in advance.
- No bus impacts are expected at this time.
- Noise level of work will be conducted in compliance with the San Francisco Noise Ordinance.

State Revolving Fund

Funding for this project has been provided in full or in part through an agreement with the State Water Resources Control Board. California’s Clean Water State Revolving Fund is capitalized through a variety of funding sources, including grants from the United States Environmental Protection Agency and state bond proceeds. The contents of this document do not necessarily reflect the views and policies of the foregoing, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

About the Sewer System Improvement Program

The North Point Facility Outfall Rehabilitation Project is part of the Sewer System Improvement Program (SSIP), a 20-year, multi-billion dollar citywide investment required to upgrade our aging sewer system.

The SSIP is the result of an eight-year community planning process and will ensure a reliable, sustainable, and seismically safe sewer system now and in the future. For more information on SSIP and to stay up to date, please visit sfwater.org/SSIP.
